

Ellen Huynh

Senior Industrial Designer

7+ years of experience leading consumer electronics, wearable hardware, and accessory programs from concept through production. Expertise in cross functional hardware development, CAD surfacing, CMF, prototyping, and manufacturing collaboration.

Experience

Snap Inc.

Industrial Designer II, SPECS Apr 2024 – Apr 2025

- Led industrial design development for AR wearable accessories, hardware charging ecosystem, and packaging programs from concept through production execution.
- Partnered closely with mechanical/electrical engineering, product, and supply chain teams to balance ergonomics, manufacturability, durability, and system-level integration.
- Developed production ready CAD surfaces, CMF strategies, streamlined Human Factor study prototypes, and visualization assets aligned with engineering and supplier requirements. Delivered innovative solutions across hardware, charging, and hardware ecosystem experiences that advanced the adoption of AR eyewear.
- Contributed to the successful launch of AR SPECS (2026) & Spectacles 5 (2024), supporting engineering integration and production readiness across hardware programs.
- Inventor on multiple filed and pending patents related to AR wearable experiences and accessory systems.

Industrial Designer, Spectacles Oct 2020 – Apr 2024

- Contributed to the industrial design development of Snap hardware and wearable ecosystem products across concept generation, prototyping, CAD development, and production execution.
- Key contributor to the launch of Pixy (2022), supported hardware integration, accessory development, and user experience refinement.

True Brands

Industrial Designer Jan 2019 – May 2020

- Led industrial design development and launch of consumer products across multiple in-house wine and barware brands, balancing aesthetics, functionality, manufacturability, and cost requirements..
- Developed soft goods and hard goods products from concept through production, including CAD development, prototyping, CMF, packaging, and supplier collaboration.

Education

Western Washington University

B.S. Industrial Design

Process

Skills

Industrial Design, Sketching, Consumer Electronics, Wearable Hardware, Hardware Product Development, Cross Functional Collaboration, CAD Surfacing, Parametric Modeling, CMF Development, Rapid Prototyping, Design for Manufacturing (DFM), Packaging, Supplier Collaboration, Product Visualization, Human Factors, & User-Centered Design.

Tools

Siemens NX, Keyshot, Solidworks, Adobe Creative Suite, Procreate, DaVinci, Visualization & Rendering, Blender, Prototyping & Appearance Modeling.
